**ABSTRACT**

~~To provide a~~ A page information display method for displaying electronic information  
~~user interface for gaining access to information which is user friendly, without regard to an~~  
~~experience of using a computer. There are included~~ includes a page turning operation  
detecting step ~~A1~~ of outputting a page turning operation detecting signal when a dragging is  
made on an operation unit in parallel or ~~anti-parallel~~ unparallel to a predefined page turning  
direction at a current page read from a storage unit ~~4~~ that is to be displayed at present, a next  
~~display page setting step A2~~ of setting a preceding page or a succeeding page immediately  
before or after a current page depending on a direction of a dragging operation to a next  
display page to be displayed ~~at the next time~~, when a page turning operation detecting signal  
is detected in the page turning operation detecting step ~~A1~~, and a page turning process step  
~~A3~~ of displaying the next display page set in the next display page setting step in place of the  
current page on a display unit~~1~~.

## ABSTRACT

A page information display method for displaying electronic information includes a page turning operation detecting step of outputting a page turning operation detecting signal when a dragging is made on an operation unit in parallel or unparallel to a predefined page turning direction at a current page read from a storage unit that is to be displayed at present, a next display page setting step of setting a preceding page or a succeeding page immediately before or after a current page depending on a direction of a dragging operation to a next display page to be displayed next, when a page turning operation detecting signal is detected in the page turning operation detecting step, and a page turning process step of displaying the next display page set in the next display page setting step in place of the current page on a display unit.
